Item No. XS-O2Z0000005005

O2xS Cylinder reading module IP66

Easy installation without complex wiring

The pascom O^{2}xS Cylinder reading module is a universal, battery-operated locking unit, which is simply plugged onto the cylinder.

Depending on your needs, the reading module can be assembled as a double knob cylinder with single-sided or double-sided authorization, half-cylinder, furniture lock or padlock.

Knob cylinder with single-sided authorization

Knob cylinder with double-sided authorization

Half cylinder *Furniture lock* *Padlock*

The communication electronics and the mechatronics are located together with the batteries in the reading module.

Replacement of the batteries is possible in an assembled condition and only with authorization. Completely discharged batteries can be charged using the low power adapter. Disassembly is possible only with authorization.

Dimensions in mm
