

Item No. XS-O2.RD00011100

pascom XS.Reader with Display (232/485)

Transponder reader for door control, barrier control and clothing machine control

The pascom XS.Reader with display enables secure identification via smartcard and can be used in a wide range of applications - from access to buildings and parking space to identification at the clothing vending machine.

If the smartcard is held to the reading field, the authorization status is shown on the display.

The built-in transponder is connected to the control module XS-O2.Nxxx / ID-Wxxxx via an RS232 or RS485 interface.

XS.Reader at the clothing machine
